DETAILED ACTION

The pre-amendment filed on 4/15/04 has been entered.

Claims 13-29 are pending in the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 19, 23-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Kim et al (US Patent No 5,576,999).

Regarding claim 1, figure 3 of Kim et al discloses a method of directing a signal path from the designated memory cells to the redundant cells based on a failure of the designated memory cells. To be specific, if there is no defective address detected, the signal path would be directed to the normal cell through pass gate 26, and when there is defective address detected, the signal path would be directed through pass gate 28.

Regarding claim 23, the normal cell array in block 1 has one of a row pair of memory cells and a column pair of memory cells.

Regarding claim 24, the redundant memory cell clearly has a line pair of memory cell.

Allowable Subject Matter

Claims 13-18, 25-29 are allowed.

Claims 20-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fail to teach or suggest a method of operating a memory device comprising the step of assigning a redundant group to the logical portion of a memory structure, responsive to a pre-selected designated group (claim 13); the step of shifting data to at least a portion of the redundant memory cells responsive to a signal representative of a pre-selected designated condition of at least a portion of the designated memory cells (claim 20); a memory device includes a controller that comprises a plurality of selectable switches having a logarithmic relationship to the number of designated memory cells (claim 25).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

-Kojima et al disclose a memory device having a redundant circuit.

-Nishikawa discloses a memory device having a redundant memory array.
